Fermi Redmine - Bug #4001

read/write git repository access without kerberos?

Description

Is there a way for a user to have read/write access to git repositories without running kerberos?
(e.g., just using ssh keys?) I have a private project 'des-sn' and I want to lower the hurdle for users to clone (and push to) the repositories.

Also, the wiki page:
https://cdcvs.fnal.gov/redmine/projects/fermi-redmine/wiki/Ssh_notes
looks a little out-of-date with the page:
https://cdcvs.fnal.gov/redmine/projects/fermi-redmine/wiki/CreatingRepositories
which was generally quite helpful, but didn't answer this access question.
