NuConDB-client - Feature #8136

Buffer size for strings is too small

03/20/2015 01:00 PM - Christopher Marshall

Description

in nucondb.cc, when getStringValue is called, the buffer size is set to 128. This is too small for MINERvA's attenuation database, which stores big strings of points and measured attenuations. I changed it to 2000 for the MINERvA install and it fixes the problem, but really it should be variably sized if possible.
