ROC-DynamicDisplays - Feature #11883

Feature # 10497 (New): Pull updates to clients

Download older versions of the code

03/03/2016 03:35 PM - Elliott McCrory

Status:	Closed	**Start date:**	03/03/2016
Priority:	Normal	**Due date:**	
Assignee:	Elliott McCrory	**% Done:**	100%
Category:		**Estimated time:**	0.00 hour
Target version:			

Description

If the newest version is "TEST" and the client is looking for the latest "PRODUCTION" version, I don't know how to download this from GIT/Redmine. Figure this out.

History

#1 - 03/03/2016 03:53 PM - Elliott McCrory

- % Done changed from 0 to 30

From Stackoverflow, I pulled this:

```
git init    (if necessary)
git clone http://cdcvs.fnal.gov/projects/roc-dynamicdisplays
git checkout commithash
```

The commit hash looks like this "45ef55ac20ce2389c9180658fdba35f4a663d204". One gets that horrific Hex value from this password-protected web page.

For example:

```
5a1e92efa7340057824665e7a82656e523185f6f
```

is the hash code from the PRODUCTION release of February 29, 2016.

This worked for me, so this might be the way to go. Now I need to implement this in some sort of shell script.

#2 - 05/15/2018 12:45 PM - Elliott McCrory

- File Versioning.pdf added

- Status changed from New to Work in progress

- % Done changed from 30 to 90

New document written on the scheme for doing this.

#3 - 10/01/2018 03:49 PM - Elliott McCrory

The focus of this issue has changed.

No longer do we imagine that we will use the "git checkout <gobbledygook>" command. The releases of the code that are relevant are on the Dynamic Displays web page. See the "versioning.pdf" document, above.

#4 - 10/17/2018 12:37 PM - Elliott McCrory

- Status changed from Work in progress to Closed

- % Done changed from 90 to 100

No need to pursue this any more.
