Description

On dunegpvm02 when I run the setup sript from my local products folder I get an error message like the one copied below. I get a similar error message when I try to do a fresh install of larsoft and run the setup script `source /grid/fermiapp/products/dune/setup_dune.sh` I've switch to dunegpvm08 and do not have this issue on that machine.

- Status changed from New to Rejected

If I understand correctly this is related to DUNE and not SBND, I would ask them.

Closing this issue as is off-topic.
