Description

The format of Email subject lines is as follows:

[401 - LHC CMS Detector Upgrades Project - Feature #4382] (New) R29. Identify items for CD-3a (if any)

The problem with this is that all the first part is identical for all issues so in most mailers the key part (the issue itself) is not shown in the index (unless you make the Email window super-wide).

Could it be changed to be more informatively formatted e.g.:

Issue #4382: (New) R29. Identify items for CD-3a (if any) [Redmine project: 401 - LHC CMS Detector Upgrades Project]

Thanks
Lucas
