Description

The e-mail following commits from GIT use to report the differences for the commit.
Recently a large commit has taken place in larpandora, with the triggering of a few large e-mails (25MB the largest).
Such e-mails create problems in mail boxes with limited space and to people with a slow connection, and they are useless to humans.
I feel the solution should be upstream (i.e. do not sent such large e-mails).
Other suggestions are welcome.

Here the header on one of the e-mails:
