<b>Description</b>			
From Gavin: Whilst putting together instructions for Tapasi (about to get her going with tests) I thought that what would make life easier is if we have a clear testing procedure. A sandbox area to test that each step works would be ideal, even a sandbox dropbox area for a few files and some way so that you can make test files and they don't show up in official datasets but you at least can test that they go through FTS. Just an idea I want to float to you both. I've not thought through the full mechanics of it but having a small framework for this would also reinforce that folks should run tests before proceeding to make 50k files.
