component:	base			

Description

The plan for rolling out Jon's DAQ Goodruns scripts is as follows:

1) Have an experienced shifter use the *shifter* script at the conclusion of each shift for one shift period; solicit feedback. Current candidates are Jarrett Brown (Weekend Swing, Oct 30-Nov 1), and Hugh Gallagher (Weekend Day, Nov 6 - Nov 8)

2a) When shifter script has been vetted, advertise to rest of shifters and put note on shift bulletin, or

2b) Try accessing script through a GUI / other non-script interface; test this as well, then advertise to rest of shifters and put note on shift bulletin

3) Jon will write an *expert* goodruns script with additional options

4) Expert shift will be tested and approved by DAQ on-call experts; DAQ experts will begin appraising shifter script input and refining diagnosis / comments

5) We will work with DQ to provide a compare/contrast function for DAQ and DQ goodruns information
