### Description

In the DUNE 35-ton DAQ, shifters are often distracted by the error message that says "error creating a CommandableFragmentGenerator with configuration parameters <...>" and miss the error message that provides useful information on the cause of the error (e.g. problem communicating with the hardware).

John proposed that we change the generic message to have "debug" status rather than "error" and change the wording of several messages to help make things more clear.

### History

**#1 - 02/29/2016 11:44 AM - Kurt Biery**

*- Status changed from New to Resolved*

Changes were made in BoardReaderCode to implement this, including a change to the message with the CFG params to make it an Info message.

**#2 - 05/04/2016 03:10 PM - Eric Flumerfelt**

*- Status changed from Resolved to Closed*
