| Description | | | |
| When I use the -r<product_root_override> option (with setup), ups active changes the -r to -q. | | | |

- Status changed from New to Assigned
- Assignee set to Marc Mengel

Interesting... When I try it, it ends up listing

```
poms          -f          -f -z          -q -m          -z -r
```

i.e. it lists it as if -r is the option to -z...

So yes, it is definitely confused.
