Description			

History

#1 - 05/20/2016 11:20 AM - John Diamond

Went out to services buildings to find SBC serial numbers and was able to query to following node information -

Location	Rack	Board Type	Serial #	MAC	IP Address	Existing Node Name	New Node Name
S60	MI60114	MVME2434	8273766	00-01-AF-0E-11-E5	131.225.117.68	ibpmp1	ubpm6s
F1	F 115	MVME2434	8163281	00-01-AF-0C-69-E5	131.225.128.39	ibpmp2	ubpmf1
F23	?	MVME2434	8367883	00-01-AF-13-50-FF	131.225.135.71	abpp1	New node

Apparently the S60 node was never registered under it's Serial #. I'll need to go out again and examine the boot parameters.

#2 - 05/20/2016 02:17 PM - John Diamond

Went out to S60 and found that the node is ibpmp1. Updated the table above.
