

Instrumentation Drivers - Bug #12753

80MHz board driver could be a little more forgiving of mistakes.

05/23/2016 02:14 PM - Dennis Nicklaus

Description			
<p>By mistake, I called cmtfintadcAcnetCreate twice with the same value as the first argument. I did this from the shell. The resulting exception kills the shell.</p> <pre>> cmtfintadcAcnetCreate 1,0x2400 value = 0 = 0x0 > cmtfintadcAcnetCreate 1,0x3400 0xcd6410 (tShellRem1): Unhandled C++ exception resulted in call to terminate</pre> <p>[Shell is now dead]]</p>

cmtfintadcAcnetCreate() was missing a try/catch block. I added one that should display the message from the exception and return -2.
