Category:			**Estimated time:**	0.00 hour
Target version:				

Description

All,
I am going to cancel Meeting #2 due to my inability to get my source code files up on to the redmine repository that Rich and I created yesterday (Thank You Rich for your assistance). It appears as though my Eclipse-based IDE ignores a system variable in Windows that would allow it to use our ssh-based kerberos tickets to be used. I am of the belief that CD can allow public-key ssh in this instance. I am waiting for verification of this. Hence the source code is not yet on the redmine repository for your viewing. I would like to do it in this manner so it can be used for future projects.

Also it is a holiday weekend and first day back to work meetings suck.

We will meet at our regular meeting time, 9:30, the following Tuesday, June 7th, in the Bungalow.
Thank you.
Greg

History

#1 - 05/27/2016 02:34 PM - Gregory Giese

I am testing a suggestion to comment on an issue rather than constantly creating new issues that refer to a common item (like all things related to Meeting #2) and would need to be cleared. Should cut the clutter. Sorry to keep cluttering up your email. Documentation is a chore at times but I'll get it figured out.
