

Protocol Compiler - Milestone #12885

Retire support for Objective-C

06/08/2016 01:19 PM - Richard Neswold

Description We don't need to maintain two languages for iOS and OS X apps. Since Swift is the future for the Apple platform, we'll retire support of ObjC once Swift support, in the protocol compiler, is complete. Apple has made it easy for ObjC code to use Swift code (and vice-versa), so there should be minimal changes to existing apps to use the new module.
