Description

INC 83201

Example 1
On 5/10, BLI 22052 was approved for $73,429 (the origonal amount was $65,000).
On 5/17, BLI 22052 was changed again to a total of $88,060
On my FY11 User Change request report, it shows that the user is trying to add $23K to the budget, based off the origonal BLI amount of $65,000. This is incorrect, because the BLI was approved on 5/10 at $73,429.
His BLI changes didn't balance based on what was given on the report, but he pointed out the change on 5/10, which I then verified on records I keep for myself.

Example 2
BLI 25791
Original amount on BLI $200,000
Changed – Approved 5/24/2011, amount $100,000
FY11 New or Updated line Items report is showing a beginning balance of $200,000 for this BLI when it should be $100,000
(there is a request to lower the BLI to $40K, the BLI will be approved at this level, but am waiting for someone else to notice this error before approval).
