Description			
A note in the wiki on how to access sub-repositories would be nice.			
Something like:			
"All repositories in a project have the same user, p-project-name. To access a sub-repository, use the same syntax as the main repository, but replacing the repository name with the new one.			
Main: ssh://p-project-name@cdcvs.fnal.gov/cvs/projects/p-project-name			
Sub: ssh://p-project-name@cdcvs.fnal.gov/cvs/projects/p-project-name-sub
