

Elog - Bug #14225

Back button search filters

10/23/2016 10:26 AM - Beau Harrison

Status:	Closed	Start date:	10/23/2016
Priority:	Normal	Due date:	
Assignee:	Kyle Hazelwood	% Done:	0%
Category:	Client	Estimated time:	0.00 hour
Target version:	Version 2.0	Spent time:	0.00 hour
Description			
Using the browser back button after a search doesn't maintain the log filters. I understand that this works as expected if I click the search again rather than the back but that's not my instinct.

I'm not sure what the expected behaviour is? Do you mean you searched > then went to the search page > then hit back and your search was gone?

1. I visit search page
2. I form a request and submit search
3. I get appropriate results for my request
4. I decide that my search isn't exactly what I want and so I use the browser back
5. The search form regex is filled out but logs and categories are blank, even though I chose some in my initial search
I expect to see the logs and categories I chose in my search initially when I navigate back with the browser

Is that clear? If not, come see me and I'll show you.

I don't think there is much I can do about this that is cross browser supported. Sorry.
