<b>Description</b> It can take quite a long time to generate the (potentially thousands) of canvases needed for complete production of large plot sets. Is there any way to speed things up? <ul style="list-style-type: none"><li>• State saving? Challenging to get the comparisons right (in the internal registry) if we try to cache them elsewhere.</li><li>• Parallelization of image generation? In principle the various directories could all be processed in parallel. Would take some refactoring however.</li></ul>
