Description			
<p>It can take quite a long time to generate the (potentially thousands) of canvases needed for complete production of large plot sets. Is there any way to speed things up?</p> <ul style="list-style-type: none">• State saving? Challenging to get the comparisons right (in the internal registry) if we try to cache them elsewhere.• Parallelization of image generation? In principle the various directories could all be processed in parallel. Would take some refactoring however.
