

FluxReader - Bug #15286

Default Genie XSec File format not always valid

01/23/2017 06:14 PM - Thomas Carroll

Status:	New	Start date:	01/23/2017
Priority:	Normal	Due date:

Target version:		Spent time:	1.00 hour
Description			
The XSec constructor looks for a file of the form "xsec_graphs_*_*_*.root" using the SetXSecFile method. However, the current default version of genie for FluxReader does not have a filename of that form nor do some of the later versions. I suggest changing the search to "xsec_graphs*.root" so long as it does not break anything.			

Associated revisions

Revision 36 - 04/24/2018 10:27 AM - Thomas Carroll

Modified setup script to use cvmfs making it compatible with the grid. Fixed issue #15286, code once again can grab the correct xsec file. Users can now pass Fluxreader xrootd paths to improve grid running.
