Description			
It would be handy if when zooming on either the main plot of ratio plot canvases, that the X-axes for both plots stayed in sync.

Hmm. I'm not sure how feasible this is -- the plot display is handled by the JSROOT library, and I think I'd have to burrow pretty deep into that to customize the response to changes in one of the canvases. So I don't think it's likely. I'll leave it on the list for a while though and see if I have any bright ideas.
