<b>Description</b>			
Hi, I get following when try to setup version g4 version v4_10_3:  setup geant4 v4_10_3 -q e10:prof  ERROR: Action parsing failed on "unsetuprequired(g4tendl v1_3)" ERROR: Found no match for product 'g4tendl' ERROR: Action parsing failed on "setupRequired(g4tendl v1_3)"  I need to setup this version in order to run the newest release of g4beamline.

This is not a ups bug. It simply means that g4tendl v1\_3 is not installed in your product directory. Are you working with mu2e? Do you have a local install of geant4, or are you getting it from some product directory maintained by someone else?

I suggest you contact the software coordinator for your experiment.

##### #2 - 04/01/2017 04:36 PM - Dorota Stefan

O I see. I setup it under dune, I will contact dune software coordinator then.  
Thanks!

OK - that means you are using geant4 v4\_10\_3 from the larsoft product directory. I see that g4tendl was accidentally left out of the geant4 v4\_10\_3 distribution bundle. That is fixed and g4tendl v1\_3 is now installed in the larsoft product directory.

I am closing this ticket.
