

VME BPM - Task #16575

Milestone # 16570 (New): Improvements for auto-tune operation

Error state during spill

05/17/2017 11:10 AM - John Diamond

Status:	New	Start date:	05/17/2017
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Spent time:	0.00 hour
Description			
Support an error state when something goes wrong before/during the spill. For example, if we fail to properly set the transition crate attenuation at the beginning of the spill the position/intensity and average position/intensity devices should return an error (and not 999).
