

GlideinWMS - Feature #17256

Create a script to write the results of all the tests in a single table

07/23/2017 10:41 PM - Marco Mambelli

Status:	New	Start date:	07/23/2017
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	v3_5_x	Spent time:	0.00 hour
Stakeholders:			
Description			
Currently, there are 3 tests: pylint, unit tests and futurize, each writing its own table. Would be simpler to have a single table with all 3.			

History

#1 - 07/24/2017 07:31 AM - Marco Mambelli

Suggestion from Parag:

This is good that we have all the info. Can we combine 3 tables into 1 and just increase number of cols? Shouldn't be too hard.

More I think about it, 3 cols for Pylint info can be combined into 1 col, PYLINT FILES(CHECKED, ERR), TOTAL ERR

Unitest table cols can be shrieked into 1 (T/E/F) and third table can be converted to a col Py3 compliant

Typically, these type of mails should display success/failure info in minimal screen area so one doesn't have to really read a single word unless they spot any red color in any cell.

The first screen of the email should have all the info to see if there is a failure. Without scrolling.
