Target version:				

Description

DuneInterface provides headers that define transient data, service interfaces and tool interfaces. At present, the tool interfaces are in the Tool subdirectory and the transient data and service interfaces are in the top-level directories. I would like to move the latter into subdirectories Data and Service.

Clients that include the data and service interface headers will need to add those directories in their include paths. I will make the changes in dunetpc but anyone with private code will need to make their own updates.

I would like to do this right away. Please let me know if you have any objections.
