Description

It would be useful to have FileDumperOutput optionally print the ID of the event being dumped.
While this information is available from normal *art* messages, these messages are not customisable and they contain timestamps.
This makes harder to compare the output of two different dump jobs.
With this option enabled and proper redirection as in issue #18152, running on the same input file should allow to create completely identical dump files, but still allow for an immediate identification of which event is printed.

An optional "PRODUCT ID" column is printed out whenever the 'wantProductID' parameter is set to true (default is false).

Implemented with commit art:55a560f.
