<b>Description</b>			
<p>This is a continuation of <a href="#">[#17825]</a> ./creation/web_base/factoryEntryStatusNow.html was not changed, waiting for feedback from Factory ops because the structure and content of the page are confusing.</p> <p>After discussing w/ Jeff:</p> <ul style="list-style-type: none"><li>- Total information block and client information block seem redundant, they are not really used by factory ops, is not clear why they have their structure, they could be removed</li><li>- Subtracting running from registered (Rundiff) should count the cores (running cores - registered cores). The glideins subtractions are not significant</li></ul> <p>Note that these are other 2 tickets open about this page, check if they can be included in the solution:</p> <ul style="list-style-type: none"><li>• <a href="#">[#3570]</a> Publish items from job.descript in factoryEntryStatusNow</li><li>• <a href="#">[#2169]</a> factoryEntryStatusNow.html buggy - mixing 3 xml files</li></ul>
