

## GlideinWMS - Feature #19947

### Do not restart condor on factory upgrade

05/14/2018 10:19 PM - Marco Mambelli

<b>Status:</b>	New	<b>Start date:</b>	05/14/2018
<b>Priority:</b>	Normal	<b>Due date:</b>

<b>Target version:</b>	v3_6_2	<b>Spent time:</b>	0.00 hour
<b>Stakeholders:</b>	Factory Ops		
<b>Description</b>			
<p>GlideinWSM includes some configuration files for HTCondor (installed in /etc/condor/config.d). These include setting the daemons to be started and include shared port daemon configurations. These changes require a restart of HTCondor.</p> <p>Currently we do automatically a condrestart in the post-install part of the RPM (specifically for usercollector, userschedd and factory). This causes a restart of condor after the initial install and all the upgrades (even if not all upgrades change the daemons or the shared port setup).</p> <p>This was enforced after a request a couple of years ago. [<a href="#">#13068</a>]</p> <p>Factory operations requested to change this in the factory. Also because the restart of condor could fail and it is not triggered manually, the failure may remain unnoticed.</p> <p>Possible actions are:</p> <ol style="list-style-type: none"><li>1. Automatically trigger a condrestart (current one)</li><li>2. Automatically trigger a reload (will take care of most configuration changes but not when daemon list and shared port are involved)</li><li>3. Do nothing automatically. Warn the sysadmin that a restart of condor is needed</li></ol> <p>It seems that the preference (by Factory and Frontend operators queried via email) is for a reload (condor_reconfig) and the addition in the RPM installation document and in the release notes (of versions that need it) of requests to do a restart.</p>
