| Target version: | 1.2.0 | Spent time: | 0.00 hour |
| Description | | | |
| Currently job process contacts all the workers directly. Although this is most efficient way of doing this, it does not work well with FNAL security, for which this access pattern resembles port scanning and they block the job address. The server needs to be re-arranged to minimize the number of TCP ports accessed by the job. Ideally to single TCP port. | | | |
