

ups - Feature #205

Allow db-relocatable entries

12/16/2009 10:37 AM - Marc Mengel

Description			
Another idea from discussing with Ron R.			
We could allow:			
<code>Product=\${UPS_PRODUCT}</code>			
etc in table files and			
<code>version=\${UPS_PROD_VERSION}</code>			
in version files, where in that case <code>\${UPS_PRODUCT}</code> would be the name of the subdirectory of the ups database in which it was found, and <code>\${UPS_PROD_VERSION}</code> would be the version part of the filename. Then renaming the database subdirectory would rename the product, and renaming the version file would change the version.
