Description

I would like to track here things I am gonna work on for automating the generation of factory configurations from CRIC (WLCG sites) and the OSG collector (OSG non-WLCG sites). In particular we will need a series of tools:

- 1) diff tool that tells the differences between two entries (this way we can spot differences between what has been generated automatically and what's already in the factory conf)
- 2) get tool to generate a stub of the factory xml configuration from CRIC and the OSG collector
- 3) merge tool that merges the stub, what's already in the configuration, and a human friendly config file operators can use to overwrite the downloaded info
