Missing build script in the nova source and noarch tarbals

11/07/2011 03:21 PM - David Mckee

Status:	Closed	Start date:	11/07/2011
Priority:	Normal	Due date:	
Assignee:	Lynn Garren	% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
Neither [[http://oink.fnal.gov/distro/art/nova_extras-0.3.2-source.tar.gz]] nor [[http://oink.fnal.gov/distro/art/nova_extras-0.3.2-noarch.tar.gz]] have the buildLhaPDF.sh script mentioned in [[https://cdcv.s.fnal.gov/redmine/projects/cet-is-public/wiki/Building_extra_packages_for_NOvA]].			
This is preventing me from installing the newest version of LArSoft at Kansas State University.

Thought that was already fixed. It's fixed now. You want http://oink.fnal.gov/distro/art/nova_extras-0.3.2-source.tar.gz

And while we're mentioning it, make sure you also pick up ups v4_9_4: <http://oink.fnal.gov/distro/relocatable-ups/ups-upd-4.9.4-source.tar.gz> You don't need to rebuild any packages you already built, but this ups has some important bug fixes and improvements.
