Description

Initial description.

Requested for: Dominic Brailsford

login_setup and job_type do not inherit from the default campaign values.

If user creates a new campaign stage in the GUI workflow editor, login_setup and job_type are not highlighted in aqua for that campaign stage. If user changes the default value of login_setup and job_type for campaign defaults, those changes do not propagate to the newly created stage.

The difference in behavior caused by the different nature of these fields, they are the selectors. This part may be completely refactored if we bring the forms from the old interface pages.
