Most of the builds failed due to missing products but the slf prof builds succeeded. However the version for the product is v07_08_00_04 while that for the manifest is v07_08_00_05. Should we synchronize these and build again? Do we want to resolve the problems with the other builds?

Sorry, David. I forgot to update the version number. Let me fix that first.

Hi David,

I retagged v07_08_00_05. Could you restart the builds? Sorry about the mistake. I think only SL builds are needed.

Thanks,
Tingjun
