Target version:	v1_8_0_RC	Spent time:	0.00 hour
Description			
<p>The monitor CI Validation job uses jobsub_q to check the status of CI Validation jobs to decide if submit a new DAG cluster of jobs. This is not always reliable. Landscape LENS API provides info about job cluster status and it is more reliable than jobsub_q. Update CI Validation workflow to use the Landscape LENS API instead of jobsub_q.</p>
