Description

I used poms_client upload_wf that call the server code ini_to_campaign to create a campaign. The campaign was created fine, but the job_type and login/setup was created under samdev/production . I intended to create under samdev/analysis and the campaign was created in samdev/analysis.

History

#1 - 02/27/2019 02:01 PM - Yuyi Guo

I figured it out that was some left from last test that used samdev/production. If I have the job_type in production, it will ignore the same named job_type in analysis. I guess this is not a bug, but a feature. .

- Tracker changed from Bug to Feature

I changed this ticket from "bug" to "feature". It is nice that we are getting the message back to the client as show below.
I tested with the campaign already in POMS and it will return the correct id. Could we also output the warning on campaigns that already in POMS just like the jobtype?

u'status: 201 Created'
u'message: '
[u"Warning: LoginSetup 'yuyi2_login' already exists and will not change.",
u"Warning: JobType 'yuyi2_prod_muminus_0-2.0GeV_isotropic_uboone_jobtype' already exists and will not change."]
u'campaign_id: 3281'

Sure, we can definitely do that. The only problem is - it might be too late as the campaign has been updated already.

We discussed in today's meeting that if a campaign is already in poms, the API should warn the user just like the job_type without overwrite it. The API should provide an option for the user to override the campaign if the user requests.

I just found that the API return below info when a poms instance is not provided. Should it return an error because there is nowhere the campaign uploaded?

Vladimir,

I talked with Marc about the updating a campaign definition that was used for submitting jobs in the past. He said that it was OK to update the existing definition because the submission details had kept in the DB.
