Description			
This was discovered this afternoon as part of SBND testing. Basically, there are two problems:			
-put_config_info_base performs a "sanity check" which doesn't account for the fact that "localhost" and "\$HOSTNAME" are referring to the same node			
-In the call to archiveRunConfiguration, the now-nonexistent self.config_for_run variable is passed; it's nonexistent because DAQInterface now thinks of the config as a set of subconfigs
