Description			
There seems to be a wrong SEC_DEFAULT_AUTHENTICATION_METHODS line in the condor config for the frontend.			
<pre># grep SEC_DEFAULT_AUTHENTICATION_METHODS /var/lib/gwms-frontend/vofrontend/frontend.condor_config SEC_DEFAULT_AUTHENTICATION_METHODS = FS,PASSWORD,GSI SEC_DEFAULT_AUTHENTICATION_METHODS = GSI <pre></pre>			
Thos second line overrides the line created form the configuration on the frontend host, forcing o nly GSI and blocking other methods.			
But somehow a schedd using only PASSWORD authentication seems to be queried correctly and trigger glideins.			
<ol style="list-style-type: none">1. Why was that line added?2. Should it be removed?3. Why PASSWORD auth seems to work anyway?
