Description			
<p>Some users have tested out tensorflow v1_12_0. It has backward compatibility. All our old code can run against this version. However, there are some new features this version provides were not enabled by our build.</p> <p>I updated the install script which installs some additional required headers, and bumped the version to v1_12_0a in the bootstrap and build script. We would like this version of UPS product being created.</p>

NOvA is urgently needing this patch. Right now people are using a patched version in my private directory. It will be greatly appreciated if this patch can be applied by scisoft asap.

Many thanks,
Pengfei
