Target version:		**Spent time:**	0.00 hour
Experiment:	NOvA		

Description

This has been reported by Alec Habig (nova):
From email:
Just noticed something today, don't know if it's new or not: but when
one searches ECL on a string that contains a colon, for example, pick
your favorite acnet device name like "e:mgsp", one gets an error in the
python making the SQL call.
Did an extra layer of quotes or something get removed somewhere,
exposing sql to unsanitized input?
