Description			
<p>We still use ups in tissue/ncis/fbi, and specifically we use the ups.py module to schlepp the environment from within python in our web apps.</p> <p>I'm seeing a whole lotta deprecation warnings: [Mon Oct 21 09:30:00 2019] [error] /fnal/ups/etc/ups.py:164: DeprecationWarning: os.popen3 is deprecated. Use the subprocess module. [Mon Oct 21 09:30:00 2019] [error] (stdin,stdout,stderr) = os.popen3(cmd)</p> <p>Need to convert to use subprocess module (or some other newer feature that works in python 2.6 and python 3).</p>
