

ACNET Service - Feature #23602

ACNETD Local Config for Nodes

11/14/2019 11:17 AM - Beau Harrison

Status:	New	Start date:	11/14/2019

Target version:			
Description			
It would be interesting to enable ACNETD to include a list of available nodes, on a small scale, from a config file or a command-line argument. By defining acceptable trunk-node combinations, ACNETD can support multiple small control systems on the same network. This abstraction provides a level of confidence that messages get sent to the intended target.

This topic is loosely related to [#16707](#). In that issue, we're also trying to find a better way to get node configuration into the node table, although that issue is requesting a better way to get it from the database.
