Description			
<p>The Web server currently uses the simple Web server coming with Flask. This is OK for a development environment but not for a production one:</p> <ul style="list-style-type: none">• vulnerability (to DoS)• scalability <p>There are many possible alternatives. Reading around seems that 2 suggested ones are nginx w/ gunicorn or uWSGI.</p> <p>The new configuration should be tested and then the RPM files and the documents should be updated</p>
