<b>Description</b>			
<p>cgWCreate.py was modified for v3_7 to copy in some needed libraries from /usr/lib to the condor tarball sent to the CE. Unfortunately, the way this was implemented was to first copy them to the unwound condor distribution in /var/gwms-factory/condor, and then wind them up into the condor_bin.tgz created in /var/gwms-factory/web-area during a reconfig. This works if the condor distribution is already present in /var/gwms-factory/condor but can fail during rpm installation.</p> <p>The part of cgWCreate.py that copies these libraries should be changed to copy the files directly into the reconfigured tarball in /var/gwms-factory/condor.</p>

made change to only copy scitokens libs into rhel7 condor tarballs  
Please see branch v37/24285 for review

- Status changed from Feedback to Closed

Not merging this.

The files should come from the downloaded condor tarball, not from the system installation.  
See [\[#24527\]](#) for the selected solution.
