Target version:	v3_6_4	Spent time:	0.00 hour
Stakeholders:			

Description

Install GlideinWMS framework on Fermicloud using OSG RPMs.

1. You will need one host for the Factory (including the condor Factory collector and schedd) and one for the Frontend (including the condor User collector/negotiator and a schedd).

Take note of the 2 host addresses (hostname) you will need them for the configuration

Take note also of the certificates DNs. Certificates are in /etc/grid-security/host*

To make new VMs and administer them use fcluigpvm01:

```
ssh fcluigpvm01.fnal.gov
```

This script will list your hosts (ID and hostname needed to ssh):

```
~marcom/bin/myhosts
```

Then login as root on your VMs:

```
ssh root@YOURVM.fnal.gov
```

And follow the install instructions linked below

2. The factory installation instructions are in the OSG documentation. Follow them to install it:

<https://opensciencegrid.org/operations/services/install-gwms-factory/>

3. The frontend installation instructions are in the OSG documentation. Follow them to install it :

<https://opensciencegrid.github.io/docs/other/install-gwms-frontend/>

Continue as much as you can and provide also feedback about the instructions
