- Status changed from New to Feedback

I put the ansible scripts in branch v36/25148 . They seem to work fine both from my mac laptop and from a fermicloud node if ansible is installed. I will merge the branch to master when given the OK

#2 - 12/02/2020 12:08 PM - Marco Mambelli

- Assignee changed from Marco Mambelli to Dennis Box

```
Hi Dennis,
thanks for contributing these.

I'm not familiar so my questions may be stupid.
Are the playbook executing all tasks one after the other or you only run the tasks one at a time manually?
I don't understand the bounce at the end of the playbooks

Then if playbooks can import other playbooks would make sense to define the condor tasks in a separate one imp
orted by both these?

OK to merge.

Thanks,
Marco
```

Make the changes if proper, then OK to merge.
