Description

Filter/producer modules should be able to register their products not just in the modules constructor, but also in code called by the constructor. Marc Paterno thinks this functionality already exists simply by passing the "this" pointer to the function and calling this->produces<blah>(). But this functionality needs to be verified.

History

#1 - 08/24/2012 12:08 PM - Christopher Green

- Category set to User Code

- Status changed from New to Resolved

- % Done changed from 0 to 100

This can be achieved by passing this to the library code as pointer-to-base, upon which the produces templates may be invoked.

#2 - 08/24/2012 12:09 PM - Christopher Green

- Status changed from Resolved to Closed
