Description

Klaus Honscheid (DES):

I typically browse the entries in the morning and add a comment where needed. I can click on "add comment" and enter my text just fine but then when I click add I get "rejected" because I forgot to log in

Then I log in but all the text I entered has disappeared which is somewhat annoying.
Could you make it so that you check whether a use is logged in or not when he clicks the add_comment button?
That way I would have to enter everything twice (when I forgot to login)

Thanks,
Klaus
