Description

OSG sees users time and time again pulling files to their jobs inefficiently. They'd like a glideinWMS file transfer plugin for http transfers that would:

1. Use local squid when appropriate
2. Handle errors correctly
3. Cache results in the pilot
4. Use the cached pilot results

#3 may be hard or impossible with gLexec use, and #4 may be even more difficult.

Just to be clear, I didn't mean to reference the old issues 3 and 4, but was referring to the items above. Gotta preview next time.
