| Currently you can only delete unused dataset definitions. Ones which have been used can't be deleted or modified. It'd be useful if they could be "retired" the same way files now can, allowing the definition name to be reused (of course, this has some implications for other definitions which refer to the retired one). |        |                        |                   |
